

Interventions

At Wyvern in the Maths department, we offer a range of interventions to support students in making progress and closing key gaps in their learning.

Numeracy Ambassadors

The Numeracy Ambassadors program is a Year 7 tutor-time initiative that takes place two mornings per week. Its goal is to close important gaps in mental calculation strategies.

Year 9 and 10 students, known as Numeracy Ambassadors, work one-to-one with Year 7 students on a range of number-based learning activities.

The program uses spaced-learning principles, where students work through a series of books. Each topic is revisited multiple times on different days to ensure long-term retention of learning.

All Wyvern College students take part in a diagnostic assessment early in Year 7 to determine whether the Numeracy Ambassadors initiative would be beneficial to them.

Core Premium

Core Premium offers selected students additional, specialised teaching designed to boost confidence and address learning gaps. During these lessons, students revisit key content to build a strong foundation in the basics.

Students follow a bespoke curriculum tailored to target their individual areas of weakness, based on skill checks and assessment feedback. This personalised approach helps students improve their fluency in specific topics, enabling them to make steady progress.
